Cylindrical Marine

Fenders

The Essential First Step

Sizes 150mm (D) to 2000mm (D)

Material Unique Rubber Compound

Compressive Deflect'n 50%

Diameter Ratio 2 : 1 (Outer : Inner) Standard. Cylindrical rubber fenders of other sizes can be produced according to customers' request.

Durability High

Additional Notes Cylindrical Fenders are easy to install and versatile for both large and small vessels to ensure safe and linear berthing. This type of fender is an easy to install, economical and cost-effective solution for longitudinal and crosswire berthing, particularly to suit applications including: bulk cargo berths, general cargo quays, pontoons and tugboat berths. They have low reaction forces, little surface pressure and reasonable energy absorption accommodating different sized vessels in the port.
