

AB-MPF
Pneumatic Marine
Fenders

The Essential First Step

Sizes 300mm (D) X 600mm (L) to 4500mm (D) X 12000mm (L)

Material Unique Rubber Compound

Internal Pressure 50 kPa to 80 kPa

Inclined Compression 15 Degrees

Durability Medium

Additional Notes Pneumatic Fenders are the ideal solution for ship-to-ship berthing as they maintain large clearances between the hull and dock or other vessels. The risk of damage during berthing is minimised, pneumatic fenders have a high rate of energy absorption and low reaction force to reduce repeated contact with the hull, jetty or dock resulting in further damage. They are ideal for permanent or semi-permanent installation, additionally they are suitable for offshore ship-to-ship transfers.
