

EDS - 55 BROCHURE

Australian Bollards have updated their innovative E-DS range with a brand new product, the EDS 55. As the name suggest, this unit boasts a stunning 55 inch, LCD display screen featuring a

brightness of 2500 housed within a sleek, clean cut design.

Whilst possessing an edge to edge thickness of just 12cm, Windows compatibility and inbuilt air cooling, this E-DS also thrives as an outdoor device with an anti-corrosion protective layer manufactured to last for more than seven years.

Inbuilt Parking Guidance Information (PGI) provides real time information within a controlled area, letting drivers know which parks are vacant and directing them towards low occupant zones, which decreases search time and removes the element of stress.

Road users can be further advantaged by Variable Message System (VMS), a feature that delivers a variety of information, with the option of requesting a payment or wishing exiting drivers a good day, enhancing customers experience.

Needless to say, Australian Bollards has continued to raise the bar with the introduction of the EDS 55.
