

LED Display Solutions

By EDS Australia

Australian Bollards range of LED Display Screens, which are part of our E-Display solutions, are the perfect device for people, organisations and businesses to broadcast or advertise clear and concise information readouts.

As a dynamic variable message sign that is made from our SMD Surface Mount Diodes, these LED display screens can exhibit a number of things including images and products. These P5 outdoor dynamic LED display screens produce a clear visible image for viewers from up to between five and three metres away.

The LED Display solution is perfect for outdoor use as it has an IP 65 rating, meaning it is well protected from environmental factors like rain and dust particles. This highly practical solution also operates in extreme temperatures ranging from -35 degrees to 60 degrees, giving the customer the assurance of a reliable product and includes a life expectancy of between 75,000-100,000 hours.
