Height 900mm

Post DIA 50mm

Base DIA 100mm

Material 304 Grade Stainless Steel

Weight 2.5Kg

Installation Surface Mounted.

Additional Notes

Australian Bollards - Flexible Bollards are mainly used in shopping centers, supermarkets and airports to protect areas from damage by collision with trolleys. There is a high chance of trolleys ramming into EAS checkpoints and areas with glass causing damage, to protect these bollards can be installed.

It is a sleek stainless steel bollard which does not require much space, so it can be easily installed in areas with high foot traffic and usage of trolleys as they will not hamper the free flow of movement.
